NOTE.

WITH the number for July, 1896, the tenth volume of the *Quarterly Journal of Economics* is brought to a close. An index of writers and subjects for the series thus closed has accordingly been prepared for the convenience of subscribers, and for greater ease of consultation by students.

In reviewing the remarkable progress of economic discussion in the United States during the decade now closed, the editors believe that they may feel satisfaction in the share taken by this Journal. The change in the interval between 1886 and 1896 has indeed been striking. While the first steps towards the enlargement and improvement of economic teaching in our institutions of learning were taken before 1886, the growth since that date has been rapid and steady. In the larger universities the opportunities for study and research no longer need fear comparison with those of any other country. The upward movement has been reflected in the character and volume of the periodical literature, which began with the almost simultaneous establishment of the *Political Science Quarterly* and the *Quarterly Journal of Economics* in 1886, and now includes a group of important publications, any one of which would have marked a new epoch if established before that date. The progress in the equipment of teachers, in the matter and methods of instruction, in the solidity of the contributions to learning, has been promoted in high degree by the opportunities for a full and free discussion, addressed not to a miscellaneous public, but to a circle of critics, investigators, and well-informed readers.

The object of this Journal has been to promote the advancement of knowledge by inviting and assisting such discussion, and the editors hope that a review of the contents of the series

now concluded will be found to justify the confidence with which they undertook this task ten years ago. The diffusion of knowledge and the application of principles may be trusted in large degree to take care of themselves, when once the advance of scientific thought has set in. It has been the object of the editors of the Journal mainly to promote the latter end. They will continue to publish in the future, as they have done in the past, papers which may appeal to but a limited number of readers. They will welcome, also, the sober and unbiassed discussion of topics of more immediate interest; and in all cases will endeavor to present matter which deserves the attention of scholars and critics. And in this endeavor they again confidently ask the co-operation of all who are interested in the advancement of knowledge within the chosen field.

INDEX OF WRITERS.

ALDRICH (R.). Some Objections to Profit-sharing	i. 232
ALLINSON (E. P.) and PENROSE (B.). Ground Rents in Philadelphia	ii. 297
